# Justification

The medical care in the emergency departments is one of the most demanding in all health units and at all levels of care.

The vast majority of doctors working in pediatric emergency departments do not have specialized training in emergencies (primary care physicians and general pediatricians). Care Management outside of an emergency specialization lacks uniformity in care protocols.

It is a priority to unify criteria of attention based on scientific evidence of the best quality available to optimize the quality of care given to pediatric patients in the emergency room.

This seminar is directed to family / general physicians (who work in a pediatric emergency environment), pediatric residents and pediatric emergency residents.
